

Gender Pay Gap Report March 2022

Under the Equality Act 2010 (Specific Duties and Public Authorities) Regulations 2017, and as an employer with over 250 employees, Landau Forte Charitable Trust is required to measure and report on the gender pay gap in the organisation. The Trust is a public sector body and has a data capture date of 31 March in each year.

Under the Regulations there is a requirement to report on the following 6 measures:

- The difference in the mean pay of full pay men and women expressed as a percentage
- The difference in median pay of full pay men and women expressed as a percentage
- The difference in mean bonus pay of full pay men and women expressed as a percentage
- The difference in median bonus pay of men and women expressed as a percentage
- The proportion of men and women who received bonus pay and
- The proportion of full pay men and women in each of four quartile bands

In relation to the other areas the data is based on 584 staff paid on the data capture date: 164 male and 420 female.

Narrative for Landau Forte Charitable Trust

Landau Forte Charitable Trust is committed to the promotion of equality of opportunity and choice for employees and supports the fair treatment of all staff irrespective of gender through our transparent recruitment process, pay policy and professional development.

The overall published UK gender pay gap in the education sector is 25.9% opposed to the national gap of 16.1%. The Trust's is 11% representing that even though the Trust's gap is closer than the national average females still earn less than their male counterparts in the sector. However, it is recognised in education that:

- More women apply to work in the sector due to working patterns ie part time work and term time contracts
- Part time work can be less highly paid
- Many female returning to employment apply to the public sector

The data does not suggest many of these factors are an issue, except potentially the part time workers who are predominately female within the Trust.

The majority of staff are in the lower pay quartiles and the workforce is predominantly female therefore the gap between average female hourly rate of pay and the average male hourly rate of pay is significantly affected.
